

## 1. What we hope for SPI – a holistic framework for all products

Product policy building blocks	<b>Ecodesign addresses supply removing 'unsustainable products'</b>	PEF helps identify benchmarks or average performance on the market	Incentives pull the market beyond better than average performance	Endorsement labels clearly identify top 10-20% performance	
Supporting measures	Ban on the destruction of unsold goods	Digital Product Passport – enables transparency and information flow	Mandatory GPP boost market for sustainable goods	Mutually reinforcing product and chemicals policies	Combining horizontal with vertical sectoral measures

## 2. What's missing – overarching measures & targets on primary resource consumption (Material Footprint)

## 3. Significance of ecodesign vs. current lack of resources / weak governance

 10Mt in CO <sub>2</sub> = 5 MILLION POLLUTING CARS	 40 BILLION EUR IN ENERGY SAVINGS	 110 EUR PER HOUSEHOLD (EU27)
