# No well-functioning EU market for secondary raw materials

No harmonization of the status for secondary raw materials in Europe incl. for recovered paper despite a harmonized quality standard (EN 643)

What should be filled in on the Annex VII ?

What type of truck ?

Status of recovered paper ?

The Netherlands : **waste**

NRW : End of waste

Hessen : **waste**

Bavaria : End of waste

Transport inside Europe is complex and expensive.

# Creating a well-functioning EU market for secondary raw materials

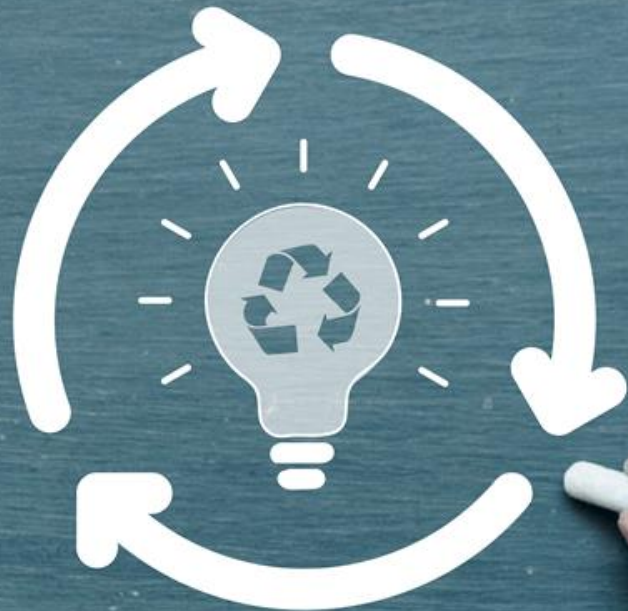

1. Better enforcement of European waste legislation, in particular separate collection to preserve quality at source
2. Simpler and faster waste shipment procedures which rely on electronic procedures to improve traceability / confidentiality and free resources from enforcement authorities to combat illegal shipments;
3. Harmonized EU end-of-waste criteria for key streams (incl. paper) to ease cross-border EU market access of secondary raw materials meeting quality standards and boost circular value chains;
