36 PARTNERS FROM 13 COUNTRIES
 France, Belgium, Switzerland, United Kingdom, Italy, Spain, Portugal, Norway, Hungary, Netherlands, Germany, South Africa & Brazil

Duration: 2020-2025+
 Start date: 01.09.2020

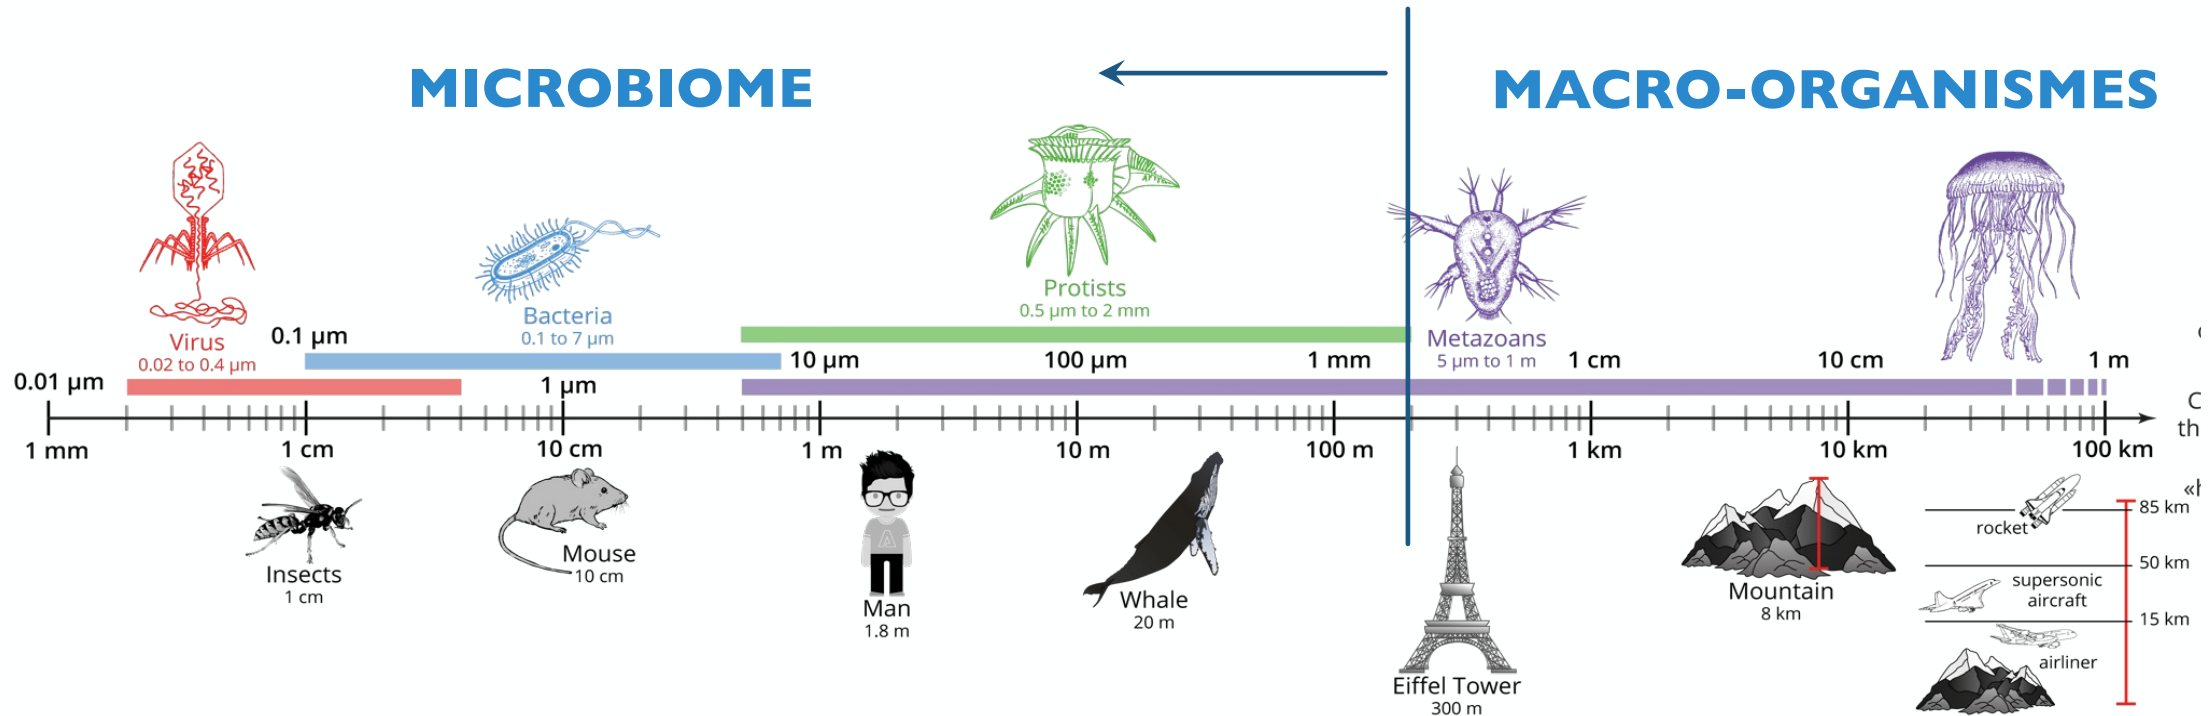

The oceanic microbiome

MICROBIOME

MACRO-ORGANISMES

SOURCE OF LIFE

Through photosynthesis, it transforms light energy and nutrients into organic matter, the basis of the marine food chain.

RESOURCES FOR SOCIETY

This ever-changing biodiversity potentially abounds with molecules of great interest for biotechnological innovation.

Benefits

The Ocean microbiome is composed of all marine microorganisms (viruses, bacteria, micro-algae, protists, etc.) and the environment within which they evolve.

REGULATORS OF ECOLOGICAL BALANCES

Among all photosynthetic organisms, marine phytoplankton is responsible for capturing and emitting half of the CO₂ and O₂ respectively.

It transforms matter and makes it available to the rest of the system. Research approaches and focus
